

Ductmaster Thermal

ductmaster

NOW
AVAILABLE IN
220x90mm

The new 220x90mm Ductmaster range adds to Nuaire's exclusive Thermal and vast PVC ducting series. The low profile nature of the 220x90mm means our ducting is suitable for applications with restricted void spaces, whilst maintaining a high capacity of air flow.

In addition to the full range of ducting and ancillaries available in size 220X90mm we have introduced new products such as our reducers, which allow a ducting system to be taken from 220X90mm to 125mm, 150mm and 204X60mm. This allows the entire Nuaire range to be interchangeable, promoting flexibility in design and install.

Reduce Installation Time by 50%

The lightweight material means that installation becomes a one-man job, while the unique clip system forms an airtight seal, with no need for sealant or tape. Installation is quick and easy, significantly reducing both costs and time spent on site.
